

10:46-11:06 Cardiovascular toxicity of cancer Immunotherapy
Pennsylvania, USA

Bonnie Ky/Univ. of

Abstract

Immune therapies are in broad clinical use with oncologic effectiveness across multiple cancer types. There are data to support potential cardiovascular adverse effects with immune checkpoint inhibitor therapy, both acutely and in the long-term. This lecture will provide an overview of the current evidence aimed at comprehensively understanding the potential adverse cardiovascular effects of immune checkpoint inhibitor therapies.
